

YOUR GRAIN HANDLING BY

FLYNN BROS. PROJECTS

Full service custom builds for your grain storage and conveyance systems

FASTER, SMARTER SYSTEMS, FOR BETTER EFFICIENCY AND TRACK VOLUME.

Building your business starts with a solid foundation and ends when you can confidently make the next profitable steps for managing your harvest storage.

To get you there confidently, Flynn Bros. is proud to extend our in-house team to your storage, handling, and conveyance projects: custom bins, drag conveyors, belt conveyors, bucket elevators, bulk weighers, and everything in between.

YOUR GRAIN HANDLING SYSTEM: FROM START TO FINISH

WHAT DOES OUR DESIGN AND CONSTRUCTION PROCESS LOOK LIKE?

It starts with your vision. With your intended space in mind, we first take some time to work out with you what the perfect grain handling system looks like for your business—including any infrastructure upgrades you may need.

After you approve your free initial plan, we fill out the details with you at every step of the process with our in-house design team and your dedicated project manager. A detailed cost structure and consistent communication keeps everything on track.

Your grain handling system is then built from the bottom-up in front of your eyes. We employ expertly engineered foundations, extremely durable bin materials, the right conveyance system for the job, and our decades of experience in delivering a superior finished product.

Want a detailed walkthrough every step of the way? **We can do that.** Your success is our mission, and with a dedicated and personable management team, we ensure you are never in the dark about where your investment is at.

Contact us today for a free consultation.

THE FLYNN BROS. ADVANTAGE

OUR RELATIONSHIPS ARE BUILT TO FIT.

Manufacturing takes more than paper and plans—the people have to fit right. Starting with the wrong strategy can often bring about complicated hand-offs, costly delays, and gaps in communication.

Launching your new grain handling system with an all-in-one team like Flynn Bros. Projects means faster, more cost effective growth—period.

Just like you, this is our hand-built business—not a factory. From design to build, we're about your business, and our method keeps you in the driver's seat.

READY TO TALK PLANS?

Call anytime—we're happy to get your next grain handling system started right.
